REASONS FOR ALLOWANCE and DRAWING REQUIREMENT

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the existing drawings are informal hand sketches and unclear printouts of computer screens. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings.

The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of the claims in this case is the inclusion of the steps of downloading, from a mainframe computer, to a local server billing data associated with customer accounts, where the billing data includes prebill data that can be downloaded on a day of verification and demand print data that can be downloaded prior to the corresponding prebill data, providing an option for immediately calculating calculated tax results without displaying predetermined categories of information stored in the database, independently from the mainframe computer, calculating calculated tax results for each of several charges in the billing data utilizing local tax rates and surcharge information populated in a Tax TAR database and resolving errors on the customer bill detected from the comparing included in all the independent claims, in combination with the other elements recited, which is not found in the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PCT document WO 98/27711, inventor Newman, discloses a method for verifying billing records, but does not disclose the claimed method which includes the steps of downloading, from a mainframe computer, to a local server billing data associated with customer accounts, where the billing data includes prebill data that can be downloaded on a day of verification and demand print data that can be down loaded prior to the corresponding prebill data, providing an option for immediately calculating calculated tax results without displaying predetermined categories of information stored in the database, independently from the mainframe computer, calculating calculated tax results for each of several charges in the billing data utilizing local tax rates and surcharge information populated in a Tax TAR database and resolving errors on the customer bill detected from the comparing.
